Subject: Settlement

Please settle with Microsoft immediately and quit this petty bickering over entrepreneurship of a private company. I have never seen such a product at such a low price for the common man for sale anywhere in the country. The all inclusive operating system is just what us retired old folks need. Adding many little program software "add-on" packages is very inconvenient, wont always work as an integrated system and cost much more. If the digital revolution is to continue in the world and the US is to remain the software leader please settle now and get on with more important business in this country. I have personally lost over 500 thousand in the stock market and I blame this debacle amongst other Clintonian charades for it. Please settle now! Janet Reno is out of office!
